

ADVANTAGES

- Can be used in both directions (inlet/outlet ducting)
- Equipment certified to ATEX, in compliance with NFPA
- Provide high degree of safety & protection
- Active explosion protection device
- Prevents combustion products from being pushed back to the process

Application	Fast acting valves can be used on all dry dust application (depending on explosion classes).
Installation Options	- This type of valve can be used in combination with Camfil's Gold Series product family as well as the Quad Pulse Package product range. - Fast acting valves can be retrofitted to existing dry dust extraction systems (subject to review).
Comment	We supply equipment which is compliant according to regional regulation such as ATEX or NFP.
